OUR GOAL IS YOUR HAPPINESS

Bonny is made up of a factory as well as trading business engaged in manufacturing, development of car cleaning , household cleaning, swimming pool cleaning ,garden tools and pet products

“

**Healthy Development,
Flexibility, Cooperation
and Improvement**

”

“

**Rapid Response and
Effective Implementation**

”

We have facility that covers 40,000 Square Meters, employed 250 to 300 workers, exported 1500 containers and reached a sales volume of 50 million US dollar in 2019.

Our workshops specialize in blow molding, injection, extrusion, sewing and bristle planting. With almost 20 years experience in researching and producing plastic products, we have exported thousands of OEM and ODM products throughout the world.

Our company is certified ISO9001 authentication, and has passed social compliance audit and factory capability audit required by many of our big customers.

It is our key belief that our workers and management staff complete all business with honesty, quality, and responsibility in mind. With these principles firmly in place, we welcome clients from all over the world to establish a life time business relationship with us, as well as the people of insight to join our team for a bright future.

⚠ Use pool chemicals exactly as directed. Follow all precautions for storage as well as use of protective equipment and clothing.

Testing the Water Chemistry

During the swim season test your water weekly.

Step 1

Pool pH test strips. Check the water balance with a test kit. Dip the test strip in the water and compare it to the chart. The pH should be between 7.2 and 7.6. Use a pH increaser or decreaser accordingly.

Step 2

Check the sanitizer levels. Sanitizers either contain chlorine (most common), salt or bromine. Chlorine levels should be between 1 and 4 parts per million. If they're high, don't worry. The sun burns off chlorine.

Step 3

Shock the water. Pool shock helps destroy contaminants in your water. It's best to add shock weekly, as well as before and after pool parties, after storms, and during periods of high temperatures.

Step 4

Add algaecide weekly. This is a good preventative measure to slow down algae growth

Common Water Problems

Cloudy Water

Poor circulation, poor filtration and improper water balance can lead to cloudy pool water. Test the water frequently and correct as needed to help keep the water clear. Shock or a water clarifier can help do the trick. Follow the directions on the product label.

Algae Growth

Algae growing on the surfaces can be caused by lack of sanitizer or preventative algaecide, or poor water balance. A high pH will impact how well your sanitizer performs. If algae is a problem, balance the water. Then add an algae treatment and clean all the surfaces. Use algaecide on a weekly basis as preventative maintenance.

Water Pumps

FIJI PUMP

MODEL	CODE	Hp	Hmax	Voltage	Frecuency	Imp. Power	Current	rpm	H nom	Q nom
			(m)	(V)	(Hz)	(W)	(A)		(m)	m3/h

FIJI 6	04010603	0.30	7.50	230	50	230	1.00	2700	5.00	6

Fiji is a high performance pump for above ground pools. It doesn't matter the pool type it always works delivering the requested flow and pressure.

They are built to be easy to operate including features like, see-through lid for easy inspection. Motor materials are rustproof, stainless steel motor shaft and sealed bearings that never need lubrication and last generation plastic materials are used for the housing.

Available from 0,18Hp up to 0,3Hp. They are provided with single phase motors.

A pre-filter has been added to prevent the entry of any foreign bodies which could cause damage to the hydraulic parts of the pump.

Fiji is quiet due to its hydraulic design providing comfort when using your aboveground pool.

All the material have been selected with a unique target that is make Alaska Strong and Durable.

Every Fiji pump is performance and pressure tested prior to shipment to ensure superior quality.

These pumps are "GS" certified.

SPARTA pumps are designed to work under a vast type of conditions. It doesn't matter the pool type it always works delivering the requested flow and pressure.

SPARTA range is built to be easy to operate including features just like, see-through lid for easy inspection and a large strainer extends time between cleanings. Motor materials are rustproof, steel motor shaft and sealed bearings that never need lubrication. Its thermoplastic housing withstands extreme heat and resist corrosion.

Five models are available 033, 050, 075, 100 and 125 with a new impeller design.

SPARTA is easy to maintain, see-through lid, large strainer and easy-to-remove drain caps for fast winterization and less chances to leak. these and other features make it an all around pump.

A new cover nut makes easy maintenance operations in the strainer.

All the material have been selected with a unique target that is to make SPARTA Strong and Durable.

Every SPARTA pump is performance and pressure tested prior to shipment to ensure superior quality.

Other options like 230V and 60Hz motors and ASTM/BS connections are available. For further information please contact with the factory.

TUV GS Certified

Filter Tanks

This filtration systems are the ideal solution for above ground pools. Easy to assembly and operate, reliable.

The filter range features a one-piece blow molded body with no joints. It is made of HDPE plastic that is weather and chemical resistant. The filter assembled on a plastic base with all the necessary accessories.

It is available on 300mm/12" and 400mm/16" filter tanks.

An aesthetic 1,25" - 5 way multiport top mount valve is included. The design of the valve makes it reliable on all the working conditions.

Suggestion for pump potency is from 80W up to 250W.

Max working pressure: 150Kpa;

Testing pressure: 250Kpa;

Testing standard: NSF stand 50

Samoa

SAMOA filtration systems are the ideal solution for above ground pools. Easy to assembly and operate, quiet are reliable.

The filter range features a one-piece blow molded body with no joints. It is made of HDPE plastic that is weather and chemical resistant. The filter assembled on a plastic base with a Fiji pump and all the necessary accessories.

Samoa is available on 300mm/12" and 400mm/16" filter tanks.

An aesthetic 1,25" - 5 way multiport top mount valve is included. The design of the valve makes it reliable on all the working conditions.

Fiji pump is available from 0,18Hp through 0,24Hp up to 0,30Hp with single phase motors in 230V and 50Hz.

A pre-filter prevents the entry of any foreign bodies which could cause damage to the hydraulic parts of the pump.

The motors are supplied with the motor pump unit and have been protected with IP-55 protection to hold hot atmospheres and high humidity levels.

Fiji pumps are "GS" certified.

Samoa filtration system is CE certified by SGS.

- 1

FILTER GROUP
The filter group and especially the electric pump should necessarily be located at a distance of at least 3.5 metres from the bowl (electricity regulation NFC-100).
- 2

WATER EVACUATION
Maintenance and wintering of the filter requires water evacuation. The evacuation should be foreseen when installing the filter group.
- 3

FILTER TUBE
In the case you want to bury the filter tubes, these should be protected against risk of deterioration, by protecting them with a cover before burying them.
- 4

POOL ORIENTATION
The pool should be positioned so the skimmer is facing the prevailing winds. The skimmer is a very important element in the filter system and is always installed facing the prevailing winds. The optimum filtering of the pool water depends on the suction capacity and position of the skimmer.
- The filter group should be located below the level of the pool and ideally at floor level of the pool, otherwise there is a risk of the pump becoming deactivated. The filter pump should be protected from splashing of water, from floods, and from humidity, in a dry, well ventilated place. Otherwise, the metallic pieces and the pump motor may become deteriorated.
